Plant Science, 81 (1992) 271–273
Elsevier Scientific Publishers Ireland Ltd.

Subject Index

Volume 81 (1992)

Acylation enzymes, petroselinic acid, triacylglycerol, microsomal preparation, carrot, *Daucus carota*, somatic, zygotic, microspore-derived embryo, 57
Acyl carrier protein, amino acid sequences comparison, cDNA sequence, nucleotide sequences comparison, transit peptide, *Zea mays* L., 215
Antibacterium rhizogenes, *Antirrhinum majus* cv., Ri plasmid, polymerase chain reaction (PCR), transgenic plant, 199
Allantoin (ureide), amides, benzyladenine, *Glycine max*, shoot organogenesis, 245
Alternaria alternata f.sp. *lycopersici*, host specific toxin, tomato, leaf necrosis development, resistance mechanism, 127
Amides, allantoin (ureide), benzyladenine, *Glycine max*, shoot organogenesis, 245
Amino acid sequences comparison, acyl carrier protein, cDNA sequence, nucleotide sequences comparison, transit peptide, *Zea mays* L., 215
Angiospermae, mitochondrial DNA, cytochrome oxidase subunit II gene, intron, insertion element, 75
Antirrhinum majus cv., Ri plasmid, polymerase chain reaction (PCR), *Antibacterium rhizogenes*, transgenic plant, 199
Apple, *Malus*, calmodulin-binding, cDNA cloning, kinase, 227

Bacillus thuringiensis, gene transfer, lepidopteran, *Manduca sexta*, potato, 83
Benzyladenine, allantoin (ureide), amides, *Glycine max*, shoot organogenesis, 245
Beta vulgaris, sugar beet, somatic embryogenesis, secondary somatic embryos, 103
Blue light, guard cell protoplasts, proton pumping, red light, guard cell differentiation, 237
Bound enzymes, cell walls, free enzymes, p*I*, thermostability, 163
Branched-chain amino acids, herbicide resistance, innoxia, free amino acids, variant cells, 191

C_4 photosynthesis, phosphoenolpyruvate carboxylase (*Sorghum* leaves), immunoadsorbent, regulatory protein phosphorylation, day/night photoregulation, 37
Calmodulin-binding, *Malus*, apple, cDNA cloning, kinase, 227
Carrot, petroselinic acid, triacylglycerol, microsomal preparation, *Daucus carota*, somatic, zygotic, microspore-derived embryo, acylation enzymes, 57
cDNA cloning, *Malus*, apple, calmodulin-binding, kinase, 227
cDNA sequence, acyl carrier protein, amino acid sequences comparison, nucleotide sequences comparison, transit peptide, *Zea mays* L., 215
Cell elongation, high root-zone temperature, seminal root, sorghum, *Sorghum bicolor*, 143
Cell walls, bound enzymes, free enzymes, p*I*, thermostability, 163
Chemical inactivation, isocitrate lyase, mechanism of enzyme action, photo-oxidation, protection by substrates, 155
Chimerism, direct sequencing, polymerase chain reaction, reversion, *Solanum tuberosum* L., starch, 135
Chlamydomonas reinhardtii, thylakoid membranes, light-harvesting-complex, norflurazon, pyridazinone, 13
Chlorophyll fluorescence, photosystem II, inactive reaction center, photosynthesis, 169
Chrysanthemum, α-glucuronidase, histochemical analysis, opines, transformation, tumour induction, 207
Cotton, *Gossypium*, peroxidase, isozymes, cotyledon, 147
Cotyledon, *Gossypium*, cotton, peroxidase, isozymes, 147
Culture medium, elongation, hypocotyl segment, meta-fluorotyrosine, isoperoxidases, specific polyclonal antibody, 47
Cyphomandra betacea, solanaceous lectin, tamarillo lectin, 183
Cytochrome oxidase subunit II gene, angiospermae, mitochondrial DNA, intron, insertion element, 75

Daucus carota, petroselinic acid, triacylglycerol, microsomal preparation, carrot, somatic, zygotic, microspore-derived embryo, acylation enzymes, 57
Day/night photoregulation, phosphoenolpyruvate carboxylase (*Sorghum* leaves), immunoadsorbent, regulatory protein phosphorylation, C_4 photosynthesis, 37
Differentiation, morphogenesis, ovule culture, *Triticum* × *Zea*, embryo culture, 117
Direct sequencing, chimerism, polymerase chain reaction, reversion, *Solanum tuberosum* L., starch, 135

Electroporation, sugarcane, gene transfer, protoplast, gene expression, 65
Elongation, culture medium, hypocotyl segment, meta-fluorotyrosine, isoperoxidases, specific polyclonal antibody, 47
Embryo culture, morphogenesis, ovule culture, *Triticum* × *Zea*, differentiation, 117
Enzyme regulation, phosphofructokinase, Mg^{2+} effect, mechanism of action, 29

Free amino acids, herbicide resistance, innoxia, branched-chain amino acids, variant cells, 191
Free enzymes, cell walls, bound enzymes, p*I*, thermostability, 163
Fruit trees, *Prunus*, prunes/plums, protoplast culture, plant regeneration, 253

Gel electrophoresis, soybean, seed cotyledon protein, 34-kDa oil-body-associated protein, varietal difference, 21

Gene expression, sugarcane, electroporation, gene transfer, protoplast, 65
Gene transfer, *Bacillus thuringiensis*, lepidopteran, *Manduca sexta*, potato, 83
Gene transfer, sugarcane, electroporation, protoplast, gene expression, 65
Globulins, immunocytochemistry, *Oryza* (seed storage proteins), protein body, storage protein, 1
α-Glucuronidase, chrysanthemum, histochemical analysis, opines, transformation, tumour induction, 207
Glycine max, allantoin (ureide), amides, benzyladenine, shoot organogenesis, 245
Gossypium, cotton, peroxidase, isozymes, cotyledon, 147
Guard cell differentiation, guard cell protoplasts, proton pumping, red light, blue light, 237
Guard cell protoplasts, proton pumping, red light, blue light, guard cell differentiation, 237
Gynogenetic plants, *Melandrium album*, ovules, parthenogenesis, placenta culture, 261

Herbicide resistance, innoxia, branched-chain amino acids, free amino acids, variant cells, 191
High root-zone temperature, cell elongation, seminal root, sorghum, *Sorghum bicolor*, 143
Histochemical analysis, chrysanthemum, α-glucuronidase, opines, transformation, tumour induction, 207
Host specific toxin, *Alternaria alternata* f.sp. *lycopersici*, tomato, leaf necrosis development, resistance mechanism, 127
Hypocotyl segment, culture medium, elongation, meta-fluorotyrosine, isoperoxidases, specific polyclonal antibody, 47

Immunoadsorbent, phosphoenolpyruvate carboxylase (*Sorghum* leaves), regulatory protein phosphorylation, C_4 photosynthesis, day/night photoregulation, 37
Immunocytochemistry, globulins, *Oryza* (seed storage proteins), protein body, storage protein, 1
Inactive reaction center, photosystem II, chlorophyll fluorescence, photosynthesis, 169
Innoxia, herbicide resistance, branched-chain amino acids, free amino acids, variant cells, 191
Insertion element, angiospermae, mitochondrial DNA, cytochrome oxidase subunit II gene, intron, 75
Intron, angiospermae, mitochondrial DNA, cytochrome oxidase subunit II gene, insertion element, 75
Isocitrate lyase, mechanism of enzyme action, photo-oxidation, chemical inactivation, protection by substrates, 155
Isoperoxidases, culture medium, elongation, hypocotyl segment, meta-fluorotyrosine, specific polyclonal antibody, 47
Isozymes, *Gossypium*, cotton, peroxidase, cotyledon, 147

Kinase, *Malus*, apple, calmodulin-binding, cDNA cloning, 227

Laccase, tryosinase, melanin synthesis, truffle, *Tuber*, 175
Leaf necrosis development, *Alternaria alternata* f.sp. *lycopersici*, host specific toxin, tomato, resistance mechanism, 127
Lepidopteran, *Bacillus thuringiensis*, gene transfer, *Manduca sexta*, potato, 83
Light-harvesting-complex, thylakoid membranes, norflurazon, pyridazinone, *Chlamydomonas reinhardtii*, 13

Malus, apple, calmodulin-binding, cDNA cloning, kinase, 227
Manduca sexta, *Bacillus thuringiensis*, gene transfer, lepidopteran, potato, 83
Mechanism of action, phosphofructokinase, enzyme regulation, Mg^{2+} effect, 29
Mechanism of enzyme action, isocitrate lyase, photo-oxidation, chemical inactivation, protection by substrates, 155
Melandrium album, gynogenetic plants, ovules, parthenogenesis, placenta culture, 261
Melanin synthesis, tryosinase, truffle, *Tuber*, laccase, 175
Meta-fluorotyrosine, culture medium, elongation, hypocotyl segment, isoperoxidases, specific polyclonal antibody, 47
Mg^{2+} effect, phosphofructokinase, enzyme regulation, mechanism of action, 29
Microspore-derived embryo, petroselinic acid, triacylglycerol, microsomal preparation, carrot, *Daucus carota*, somatic, zygotic, acylation enzymes, 57
Microsomal preparation, petroselinic acid, triacylglycerol, carrot, *Daucus carota*, somatic, zygotic, microspore-derived embryo, acylation enzymes, 57
Mitochondrial DNA, angiospermae, cytochrome oxidase subunit II gene, intron, insertion element, 75
Morphogenesis, ovule culture, *Triticum* × *Zea*, differentiation, embryo culture, 117
Morphogenesis, *Valeriana wallichii*, plant regeneration, 111

Norflurazon, thylakoid membranes, light-harvesting-complex, pyridazinone, *Chlamydomonas reinhardtii*, 13
Nucleotide sequences comparison, acyl carrier protein, amino acid sequences comparison, cDNA sequence, transit peptide, *Zea mays* L., 215

Oil-body-associated protein (34-kDa), soybean, seed cotyledon protein, gel electrophoresis, varietal difference, 21
Opines, chrysanthemum, α-glucuronidase, histochemical analysis, transformation, tumour induction, 207
Oryza (seed storage proteins), globulins, immunocytochemistry, protein body, storage protein, 1
Ovules, gynogenetic plants, *Melandrium album*, parthenogenesis, placenta culture, 261
Ovule culture, morphogenesis, *Triticum* × *Zea*, differentiation, embryo culture, 117

P700 chlorophyll *a* protein, transcription, ribosomal protein S14, plastid genes, rice, 93
Parthenogenesis, gynogenetic plants, *Melandrium album*, ovules, placenta culture, 261
Peroxidase, *Gossypium*, cotton, isozymes, cotyledon, 147
Petroselinic acid, triacylglycerol, microsomal preparation, carrot, *Daucus carota*, somatic, zygotic, microspore-derived embryo, acylation enzymes, 57
Phosphoenolpyruvate carboxylase (*Sorghum* leaves), immunoadsorbent, regulatory protein phosphorylation, C_4 photosynthesis, day/night photoregulation, 37
Phosphofructokinase, enzyme regulation, Mg^{2+} effect, mechanism of action, 29
Photo-oxidation, isocitrate lyase, mechanism of enzyme action, chemical inactivation, protection by substrates, 155
Photosynthesis, photosystem II, inactive reaction center, chlorophyll fluorescence, 169

Photosystem II, inactive reaction center, chlorophyll fluorescence, photosynthesis, 169
p*I*, cell walls, bound enzymes, free enzymes, thermostability, 163
Placenta culture, gynogenetic plants, *Melandrium album*, ovules, parthenogenesis, 261
Plant regeneration, fruit trees, *Prunus*, prunes/plums, protoplast culture, 253
Plant regeneration, morphogenesis, *Valeriana wallichii*, 111
Plastid genes, transcription, P700 chlorophyll *a* protein, ribosomal protein S14, rice, 93
Polymerase chain reaction, chimerism, direct sequencing, reversion, *Solanum tuberosum* L., starch, 135
Polymerase chain reaction (PCR), *Antirrhinum majus* cv., Ri plasmid, *Antibacterium rhizogenes*, transgenic plant, 199
Potato, *Bacillus thuringiensis*, gene transfer, lepidopteran, *Manduca sexta*, 83
Protection by substrates, isocitrate lyase, mechanism of enzyme action, photo-oxidation, chemical inactivation, 155
Protein body, globulins, immunocytochemistry, *Oryza* (seed storage proteins), storage protein, 1
Proton pumping, guard cell protoplasts, red light, blue light, guard cell differentiation, 237
Protoplast, sugarcane, electroporation, gene transfer, gene expression, 65
Protoplast culture, fruit trees, *Prunus*, prunes/plums, plant regeneration, 253
Prunes/plums, fruit trees, *Prunus*, protoplast culture, plant regeneration, 253
Prunus, fruit trees, prunes/plums, protoplast culture, plant regeneration, 253
Pyridazinone, thylakoid membranes, light-harvesting-complex, norflurazon, *Chlamydomonas reinhardtii*, 13

Red light, guard cell protoplasts, proton pumping, blue light, guard cell differentiation, 237
Regulatory protein phosphorylation, phosphoenolpyruvate carboxylase (*Sorghum* leaves), immunoadsorbent, C_4 photosynthesis, day/night photoregulation, 37
Resistance mechanism, *Alternaria alternata* f.sp. *lycopersici*, host specific toxin, tomato, leaf necrosis development, 127
Reversion, chimerism, direct sequencing, polymerase chain reaction, *Solanum tuberosum* L., starch, 135
Ribosomal protein S14, transcription, P700 chlorophyll *a* protein, plastid genes, rice, 93
Rice, transcription, P700 chlorophyll *a* protein, ribosomal protein S14, plastid genes, 93
Ri plasmid, *Antirrhinum majus* cv., polymerase chain reaction (PCR), *Antibacterium rhizogenes*, transgenic plant, 199

Secondary somatic embryos, *Beta vulgaris*, sugar beet, somatic embryogenesis, 103
Seed cotyledon protein, soybean, 34-kDa oil-body-associated protein, gel electrophoresis, varietal difference, 21
Seminal root, cell elongation, high root-zone temperature, sorghum, *Sorghum bicolor*, 143
Shoot organogenesis, allantoin (ureide), amides, benzyladenine, *Glycine max*, 245
Solanaceous lectin, *Cyphomandra betacea*, tamarillo lectin, 183
Solanum tuberosum L., chimerism, direct sequencing, polymerase chain reaction, reversion, starch, 135
Somatic, petroselinic acid, triacylglycerol, microsomal preparation, carrot, *Daucus carota*, zygotic, microspore-derived embryo, acylation enzymes, 57
Somatic embryogenesis, *Beta vulgaris*, sugar beet, secondary somatic embryos, 103
Sorghum, cell elongation, high root-zone temperature, seminal root, *Sorghum bicolor*, 143
Sorghum bicolor, cell elongation, high root-zone temperature, seminal root, sorghum, 143
Soybean, seed cotyledon protein, 34-kDa oil-body-associated protein, gel electrophoresis, varietal difference, 21
Specific polyclonal antibody, culture medium, elongation, hypocotyl segment, meta-fluorotyrosine, isoperoxidases, 47
Starch, chimerism, direct sequencing, polymerase chain reaction, reversion, *Solanum tuberosum* L., 135
Storage protein, globulins, immunocytochemistry, *Oryza* (seed storage proteins), protein body, 1
Sugarcane, electroporation, gene transfer, protoplast, gene expression, 65
Sugar beet, *Beta vulgaris*, somatic embryogenesis, secondary somatic embryos, 103

Tamarillo lectin, solanaceous lectin, *Cyphomandra betacea*, 183
Thermostability, cell walls, bound enzymes, free enzymes, p*I*, 163
Thylakoid membranes, light-harvesting-complex, norflurazon, pyridazinone, *Chlamydomonas reinhardtii*, 13
Tomato, *Alternaria alternata* f.sp. *lycopersici*, host specific toxin, leaf necrosis development, resistance mechanism, 127
Transcription, P700 chlorophyll *a* protein , ribosomal protein S14, plastid genes, rice, 93
Transformation, chrysanthemum, α-glucuronidase, histochemical analysis, opines, tumour induction, 207
Transgenic plant, *Antirrhinum majus* cv., Ri plasmid, polymerase chain reaction (PCR), *Antibacterium rhizogenes*, 199
Transit peptide, acyl carrier protein, amino acid sequences comparison, cDNA sequence, nucleotide sequences comparison, *Zea mays* L., 215
Triacylglycerol, petroselinic acid, microsomal preparation, carrot, *Daucus carota*, somatic, zygotic, microspore-derived embryo, acylation enzymes, 57
Triticum × *Zea*, morphogenesis, ovule culture, differentiation, embryo culture, 117
Truffle, tryosinase, melanin synthesis, *Tuber*, laccase, 175
Tryosinase, melanin synthesis, truffle, *Tuber*, laccase, 175
Tuber, tryosinase, melanin synthesis, truffle, laccase, 175
Tumour induction, chrysanthemum, α-glucuronidase, histochemical analysis, opines, transformation, 207

Valeriana wallichii, morphogenesis, plant regeneration, 111
Variant cells, herbicide resistance, innoxia, branched-chain amino acids, free amino acids, 191
Varietal difference, soybean, seed cotyledon protein, 34-kDa oil-body-associated protein, gel electrophoresis, 21

Zea mays L., acyl carrier protein, amino acid sequences comparison, cDNA sequence, nucleotide sequences comparison, transit peptide, 215
Zygotic, petroselinic acid, triacylglycerol, microsomal preparation, carrot, *Daucus carota*, somatic, microspore-derived embryo, acylation enzymes, 57
